PROJECT EXPLANATION

1. Smart Dustbin With Dry and Wet Waste in IOT

The Smart Dustbin with Dry and Wet Waste Segregation is an IoT-based system designed to automate waste separation, improving waste management efficiency. It uses an ultrasonic sensor to detect the presence of waste and a soil moisture sensor to identify whether the waste is dry or wet.

2. Sentiment Analysis of Amazon Reviews

Sentiment Analysis of Amazon Reviews is a project where we use machine learning to find out if a customer's review on Amazon is positive, negative, or neutral.

3. Fake News Detection using Machine Learning

Fake News Detection using Machine Learning is a project where we teach a computer to tell if a news article is real or fake by calculating and analyzing performance percentages.
