PROJECTS

- **ENHANCED SMALL DRONE DETECTION USING OPTIMIZED YOLOv8 WITH ATTENTION MECHANISMS.**

This project addresses the rising safety and security concerns due to drone misuse by developing an efficient real-time drone detection system. It enhances the lightweight YOLOv8n model by integrating attention modules—specifically ResCBAM—and adding a tiny detection head to improve recognition of small objects. The final model, P2-YOLOv8n-ResCBAM, achieves a higher detection accuracy (mAP 92.6%) while maintaining real-time performance, making it suitable for distinguishing drones from similar objects like birds in aerial surveillance systems.
