EXPERIENCE

YBI FOUNDATION – REMOTE

June2023-July2023

Internship

- Executed all assigned Data Science and ML projects, delivering 100% of project deliverables within the defined timelines.
- Applied academic knowledge in Python, NumPy, and Scikit-learn to solve practical, real-world Machine Learning challenges and complete assigned tasks.
- Cultivated advanced professional skills, including time management and effective technical communication through hands-on project experience.

CONGIFYZ – REMOTE

June2024-July2024

Internship

- Designed and deployed interactive business intelligence dashboards and reports using Power BI, enabling data-driven decision-making.
- Transformed raw business data into actionable insights through the creation of custom visuals and calculated measures (DAX) within Power BI.

PROJECTS

College seat prediction

- A predictive model designed to estimate the likelihood of a student securing an engineering college seat in Tamil Nadu (TNEA).
- The system uses historical cutoff data, candidate rank, community category, and preferred courses to provide data-backed college recommendations, helping students make informed decisions during the counseling process.

Crime Hotspot Prediction and Localization for Women's Safety

- Developed a Python/Flask web platform utilizing an Explainable Decision Tree and Google Maps API for high-accuracy crime zone prediction and safe route guidance.
- Implemented X2 feature selection and a proactive alert system to enhance user safety and risk awareness in real-time significantly.
