CERTIFICATION

IBM DIGILABS

Machine Learning with Python

HP LIFE

Data Science and Analytics

SSI EDUCATION

Python Programming

INTERNSHIP

Femtosoft-Data Analyst

TECHNICAL SKILLS

- Data Analysis
- Machine Learning Algorithms
- Data Visualization
- Python Programming
- MySQL
- Data Preprocessing
- Power BI
- Excel

SOFT SKILLS

- Data-Driven Decision Making
- Agile Mindset
- Team Collaboration

LANGUAGES

- English
- Tamil

PROFILE

Aspiring Data Science Student with a strong foundation in data analysis, machine learning, and statistical modeling, eager to harness data-driven insights to solve real-world problems. I am committed to continuously refining my skills in data science and contributing to innovative solutions that drive business growth. My goal is to collaborate with forward-thinking teams, tackle complex challenges, and make meaningful contributions to the evolving field of data science. I am passionate about leveraging AI and big data technologies to optimize decision-making and enhance operational efficiency.

EDUCATION

The American College	2023-2025
Master of Data Science	
The American College	2020-2023
Bachelor of Computer Science	

PROJECTS

Tourism Management System using PHP & MySQL

The Tourism Management System is a web-based application using PHP and MySQL for efficient tour booking and management. It features user authentication, tour package management, online booking, and an admin dashboard for handling reservations and reports. This system enhances the travel experience while simplifying operations for tourism agencies.

Car Sales Price Prediction using Machine Learning

The Car Price Prediction System is a machine learning-based application developed using Python and MySQL to estimate the price of used cars. It analyzes various factors such as brand, model, year, mileage, fuel type, transmission, and location to predict an accurate resale value. The system leverages data preprocessing, feature engineering, and regression algorithms like Linear Regression, Random Forest, and XGBoost for predictions. Users can input car details to get an estimated price, helping buyers and sellers make informed decisions. This system enhances transparency in the used car market by providing data-driven price estimations.

Animal Detection using Yolo V8

The Animal Detection System leverages YOLOv8, a state-of-the-art deep learning model, to detect and classify animals in images and videos with high accuracy. Built using Python, OpenCV, it processes real-time data from cameras or uploaded media to identify various animal species. The system is useful for applications like wildlife monitoring, conservation, and security surveillance. By providing fast and accurate detections, it helps researchers, wildlife authorities, and farmers in effective animal tracking and management.
