

VARUN KUMAR S

Final year integrated M.tech software engineering student

✉ itsvarunherese@gmail.com ☎ +91 6382555591 🔄 varuno104 🌐 varun kumar 📍 indian

EDUCATION

XII (STATE BOARD) <i>Vaani Matric School - Vaniyambadi</i> CGPA: 9.2 (May-2021)	05/2021
X (STATE BOARD) <i>Vaani Matric School - Vaniyambadi</i> CGPA: 8.4 (May-2019)	05/2019
M.Tech Software Engineering <i>VIT-Vellore</i> CGPA: 8.56 (Dec-2025)	05//2026

SKILLS

PROGRAMMING Java, python, C#	WEB DEVELOPMENT HTML, CSS, Javascript
SOFTWARE TESTING Quality Assurance, Automation testing	TECHNICAL SKILLS Machine learning, UI/UX Designing, Devops
TOOLS Cisco Packet Tracer, Azure Devops, Bit Bucket, WAPT	

EXPERIENCE AND CERTIFICATION

INTERNSHIP-TEACHNOOK This internship provided me assistance to learn Data Science. As an intern I have collaborated with senior developers to train and test the different software projects using google collaboration and Jupiter.	BANGLORE
AI-900: MICROSOFT AZURE AI FUNDAMENTALS This certification empowered me by understanding of essential principles related to artificial intelligence and machine learning within the Microsoft Azure ecosystem. This certification program equips individuals with the knowledge and skills necessary to navigate the rapidly advancing field of AI, preparing them to leverage AI solutions within their organizations	

ACADEMIC PROJECTS

AI-DRIVEN AUTOMATED SHUTTER SURVEILLANCE AND SAFETY SYSTEM Developed an AI-driven surveillance and safety system using Python, OpenCV, and Twilio, integrating face recognition and automated alerts to enhance real-time shutter monitoring, controlled access, and user safety across residential and industrial settings.
IOT BASED RECYCLABLE WASTE CLASSIFIER IN PUBLIC SECTOR An IoT-based recyclable waste classification system automates the identification and separation of recyclable waste at source to reduce the time and effort associated with manual recycling. Algorithms used are YOLOv7 (You Only Look Once) Object Detection, EfficientNet/ResNet for Classification.
Network Intrusion Detection System Using hybrid approach: Developed a Network Intrusion Detection System (NIDS) using LSTM and KNN models on the NSL-KDD dataset to identify and classify network attacks. Built a MERN stack web interface for real-time intrusion detection and visualization, and evaluated model performance using accuracy, precision, recall, and F1-score.
