PROFILE INFO

Detail-oriented and organized Data Annotator with 2 years of experience in annotating large datasets for machine learning model training. Skilled in data annotation techniques and tools, including Amazon SageMaker Ground Truth. Proven track record of delivering high-quality training data and improving model accuracy. Strong understanding of machine learning concepts and data requirements.

SKILLS

- Computer vision
- LLM
- LiDAR Annotation(3D/2D Point cloud)
- Data Annotation
- Sensor fusion (camera+LiDAR)
- Bounding box
- Object Tracking
- Data Labeling
- Video and Audio annotation
- Polygon segmentation
- Autonomous vehicle tracking

LANGUAGE

- ENGLISH
- TAMIL

EDUCATION

YEAR: 2018-2022

[VSB ENGINEERING COLLEGE | KARUR](#)

Bachelor Of Engineering in Mechanical Engineering

CGPA: 7.98

YEAR: 2017-2018

[KARUR SARASWATHI VIDHYALAYA HIGHER SECONDARY SCHOOL | KARUR](#)

Department of Computer science with Mathematics and Physics

Percentage: 71.91%

EXPERIENCE

[Objectways Technology](#)

- Performed LiDAR point cloud annotation for autonomous driving perception systems, accurately labeling vehicles, pedestrians, lanes, and infrastructure elements in 3D space.
- Executed sensor fusion annotation by aligning LiDAR and camera datasets to ensure high spatial accuracy in object detection and tracking.
- Created and validated bounding boxes, polygons, and semantic segmentation masks for diverse object classes in both 2D and 3D data.
- Supported computer vision model training and testing by delivering structured and verified datasets, enhancing detection performance and model reliability.
- Conducted quality audits, frame-by-frame consistency checks, and reannotation reviews to achieve over 98% dataset accuracy.
- Worked closely with AI engineers to identify annotation edge cases, refine labeling standards, and implement process improvements for workflow efficiency.

TOOLS

- CVAT
- Labelbox
- VGG Image annotator
- Rectlable
- Scalabel
- Segment.ai

CLOUD PLATFORMS

- AWS S3
- Google cloud

- Utilized annotation platforms such as CVAT, Supervisely, Scalabel, and Labelbox for both 2D and 3D labeling projects.

- Contributed to data management, documentation, and version control for large-scale image and LiDAR datasets.

KEY PROJECT

- Autonomous Driving Dataset Annotation: Labeled over 15,000 LiDAR frames and 30,000+ images for real-time object detection and segmentation models.

- Sensor Fusion Initiative: Enhanced accuracy of 3D perception models by integrating synchronized LiDAR and camera data streams.

- . Quality Optimization Project: Reduced annotation review time by 20% through refined process checklists and automated consistency validation scripts.
